

# Chelios Massage Method

Chelios Massage Method (CMM) is an innovative release methodology that instills “fascial elasticity” for natural pain-free mobility that lasts.

CMM optimizes *friction-based* compressions and tractions to reset the body’s mass fabric. Traditional massage temporarily soothes *symptoms* with a targeted spot treatment approach. Chelios Method uproots mass-adhered fibers and toxins to resolve and prevent the “chronic cause”.

CMM opened its Oak Brook **Fascia Rescue® Massage Clinic** in 2019. Its 4-LMT team services an average of 80 clients per month. Quick-climbing referrals and stellar 5-star Google reviews speak to the immense value that clients experience with this progressive approach.

The massage therapist profession is slated to grow 32% by 2030. There is sweeping demand for an original results-oriented approach that fortifies sustainable well-being.
